

Uni-Clip™ End Clip

For numerous rigid framing connections and conditions, including two-axis loading, shear and tension.

ClarkDietrich's Uni-Clip™ end clip is a universal framing clip used to attach and support numerous rigid framing conditions. The Uni-Clip framing clip has a stiffened corner that provides superior design values. Embossed fastening patterns ensure easy, accurate placement of screws or powder-actuated fasteners. Designed to transfer large horizontal and vertical loads, this clip is ideal for most rigid connections, including shear, tension and two-axis loading.

ALTERNATIVE PRODUCTS

- EasyClip™ D-Series™ Anchor Clip
- EasyClip T-Series™ Tall Anchor Clip
- EasyClip E-Series™ Support Clip
- Universal Bypass Clip

PRODUCT DIMENSIONS

3-1/2" x 1-1/2" x 4-1/2"

MATERIAL SPECIFICATIONS

- Gauge: 14 gauge (68mils)
- Design Thickness: 0.0713 inches
- Coating: G90
- Yield Strength: 50ksi
- ASTM: A653/A653M

INSTALLATION

Uni-Clip end clips are attached to cold-formed steel framing members using #10 minimum self-drilling screws driven through the clip holes into the steel framing. Follow the required fastener and anchor placement patterns to achieve the allowable load. Connections to the primary building frame can be made with powder-actuated fasteners, screws or welds per design requirement.

*See General Note #6 on page 9 for the definition of PAF, minimum requirements and other additional information.

Notes:

- The 1/3 stress increase for wind shall not be used.
- Attach the Uni-Clip to the stud framing using Buildex #10-16 (min.) self-drilling screws.
- When using 2 anchors, use the outermost marks on the short leg of the clips for anchor placement.
- Attach building anchors to the structure according to the manufacturer's instructions. Anchors shall be installed through the embossments on the scored line of the 1-1/2" leg of the clip.
- When using #12-24 for clips that have load combinations of F1, F2 and F3, use a linear interaction for combinations of F1 and F3, and a squared interaction for combinations of F1 and F2. When using PAFs, use a linear interaction for combinations of F1 and F3, and for combinations of F1 and F2.
- Capacities listed for PAFs are based on minimum PAF requirements listed in General Note #6 on page 9.
- It is the responsibility of the design professional to detail the project drawings for proper clip installation.
- For connections to concrete, or other technical assistance, contact ClarkDietrich at 888-437-3244.
- Buildex is a registered trademark of Illinois Tool Works Inc.
